## 1. Introduction

### 1.1. Objective

EXP has been retained by A & B Bulat Homes Ltd. to prepare a traffic impact study in support of the proposed residential development located at 166 Boyd Street, within the jurisdiction of the Town of Carleton Place (herein "the Town"). Based on correspondence with the Town, this study will examine the impact of the development on the surrounding study area in both the context of nearby background developments and the expected joining of Boyd Street between Arthur Street and Taber Street.

Coordination with the Town was conducted before the study and Terms of Reference outlining the scope of work was determined, including the Town's comments. The terms of reference are provided as **Appendix A**. The proposed site plan is illustrated in **Appendix B**.

## 2. Study Area

### 2.1. Road Network

The study area is described as follows, while **Figure 1**. visualizes the lane configuration for the study area. All intersections in the study area are unsignalized. The location of the development is illustrated in **Figure 2**.

**Mississippi Road** is a two-lane, 50km/h collector road. Mississippi Road runs north/south through Carleton Place between Lake Avenue W and Highway 7.

**Boyd Street** is a two-lane, 50km/h local road. Boyd Street runs north/south and is segmented into three parts: between Morris Street and Taber Street, between Arthur Street and Woodward Street, and between Donald Street and Lake Avenue W.

**Arthur Street** is a two-lane, 50km/h local road. Arthur Street runs east/west between Boyd Street and Lansdowne Avenue, where it turns into Coleman Street and continues through Carleton Place until McNeely Street.

**Woodward Street** is a two-lane, 40km/h local road. Woodward Street runs east/west between Mississippi Road and Napolean Street.

**Napolean Street** is a two-lane, 50km/h local road. Napolean Street runs north/south between Lake Avenue W and Highway 7.

**Morris Street** is a two-lane, 50km/h local road. Morris Street runs east/west between Dunham Street and Napolean Street.

**Taber Street** is a two-lane, 50km/h local road. Taber Street runs east/west between Matthews Street and Boyd Street.

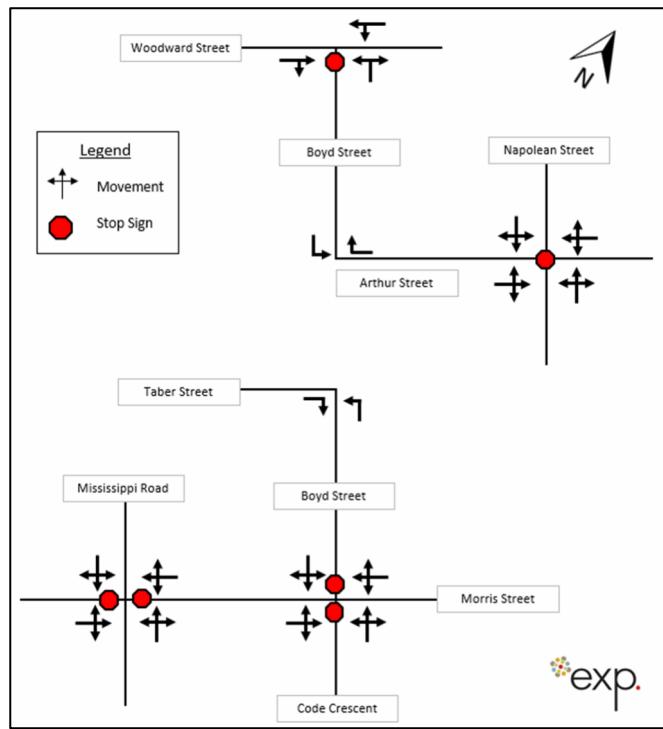

Figure 1 - Lane Configuration

Figure 2 - Study Area

### 3. Study Context and Information

#### 3.1. Assessment of Operations

The operational analysis will be conducted at indicated intersections in the study area. Analysis will be conducted with Synchro 11 using Highway Capacity Manual 6th Edition (HCM 6th) methodology. Measures of effectiveness used for the analysis will be delay (measured in seconds), volume over capacity (v/c), Level of Service (LOS), and 95<sup>th</sup> percentile queue length.

Critical movements are determined based on the following criteria:

- Reporting a v/c ratio over 1.00.
- Reporting an LOS of “F”.
- Reporting the 95th percentile queue length exceeds the storage length or obstructs an upstream intersection.

HCM 6th outputs queue length as number of vehicles; the length of the queue is determined by multiplying the number of vehicles per lane value by 7.6. When determining network settings, the storage passenger car length was set as 7.6 meters by default. This value is the average length of a passenger vehicle, measured from the front bumpers of the first vehicle to the front bumper of the second vehicle.

#### 3.2. Study Approach

As previously mentioned, Synchro 11 and HCM 6<sup>th</sup> Edition methodology will be used in the operational analysis of this study. Intersection LOS is a recognized method of quantifying the efficiency of traffic flow at intersections. It is based on the delay experienced by individual vehicles executing various movements (Left, Through, and Right) heading to a specific direction. The intersection analysis considered three separate measures of performance: the LOS for each turning movement, the volume to capacity ratio (v/c) for each turning movement and the 95<sup>th</sup> percentile queue length.

The highest possible rating is LOS A, under which the average total delay is equal or less than 10 seconds per vehicle. When the average delay exceeds 80 seconds at signalized intersections, the movement is classed as LOS F, a failed condition, and potential remedial measures are proposed. **Table 1** summarizes the HCM delay thresholds.

*Table 1 – Highway Capacity Manual (HCM) Delay Threshold*

Level of Service (LOS)	Signalized Intersection	Unsignalized Intersection
	Average Total Delay (s/veh)	Average Total Delay (s/veh)
<b>A</b>	$\leq 10$	$\leq 10$
<b>B</b>	$> 10 \text{ and } \leq 20$	$> 10 \text{ and } \leq 15$
<b>C</b>	$> 20 \text{ and } \leq 35$	$> 15 \text{ and } \leq 25$
<b>D</b>	$> 35 \text{ and } \leq 55$	$> 25 \text{ and } \leq 35$
<b>E</b>	$> 55 \text{ and } \leq 80$	$> 35 \text{ and } \leq 50$
<b>F</b>	$> 80$	$> 50$

### 3.2.1. Horizon Years

The horizon years for the study were outlined in the Terms of Reference. The years for the study will be the existing year, the expected build out year, and the 5-year post build out horizon. The development is expected to be built out within 1 year of the existing year. **Table 2** visualizes the horizon years.

*Table 2 - Horizon Year Outline*

Year	Future Background Conditions	Future Total Conditions
<b>2024 (Existing)</b>	Collected Traffic Volumes	-
<b>2025 (Build Out Year)</b>	Existing * 2% annual growth + external background developments	2025 Background + Site Generated Trips
<b>2030 (5-Year Post Build Out)</b>	Existing * 2% annual growth + external background developments	2030 Background + Site Generated Trips

### 3.2.2. Data Collection

The time periods to be studied are the weekday AM peak hour and the weekday PM peak hour. The peak periods for this study were assumed to be between 7:00-9:00 AM and 4:00-6:00 PM.

The turning movement counts (TMCs) for all study area intersections were conducted on January 10, 2024. The traffic data collected is provided as **Appendix C**.

## 4. Existing Conditions

### 4.1. Existing Traffic Operations

Based on the TMCs, the existing traffic volumes for the study area intersections are as presented in **Exhibit 1**. The operational analysis for the existing conditions is outlined in **Table 3**. The outputs for the synchro analysis are provided in **Appendix D**.

*Table 3 - Existing Traffic Operations Analysis*

Intersection	Movement	AM Peak Hour				PM Peak Hour			
		v/c	Delay	LOS	95th Q (veh)	v/c	Delay	LOS	95th Q (veh)
Boyd St & Woodward St	Overall	-	3	A	-	-	4	A	-
	EB-TR <sup>1</sup>	-	-	-	-	-	-	-	-
	WB-LT	0.00	7	A	0.0	0.00	7	A	0.0
	NB-LR	0.02	9	A	0.1	0.05	9	A	0.1
Napolean St & Arthur St	Overall	-	8	A	-	-	9	A	-
	EB-LTR	0.05	8	A	0.2	0.05	8	B	0.2
	WB-LTR	0.11	8	A	0.4	0.27	9	B	1.1
	NB-LTR	0.12	7	A	0.4	0.13	8	A	0.4
	SB-LTR	0.05	8	A	0.1	0.08	8	A	0.3
Mississippi Rd & Morris St	Overall	-	3	A	-	-	3	A	-
	EB-LTR	0.01	10	A	0.2	0.01	10	A	0.0
	WB-LTR	0.04	9	A	0.1	0.10	11	B	0.3
	NB-LTR	0.00	8	A	0.0	0.00	7	A	0.0
	SB-LTR	0.00	8	A	0.1	0.01	8	A	0.0
Morris St & Code Cres/Boyd St	Overall	-	3	A	-	-	2	A	-
	EB-LTR	0.00	8	A	0.0	0.01	7	A	0.1
	WB-LTR	0.00	7	A	0.0	0.00	7	A	0.1
	NB-LTR	0.01	9	A	0.1	0.00	9	A	0.1
	SB-LTR	0.01	9	A	0.3	0.02	9	A	0.1

The operational analysis indicates that no issues arise related to traffic volumes within the study area. In both peak hours, all movements are at worse an LOS of 'B' which is considered acceptable as per the assessment of operations. No queueing issues have been identified at any locations.

Of note, the eastbound through-right movement on Woodward Street at Boyd Street returned no results; it is implied this movement is free flowing. There is no stop control for Woodward Street at the intersection and very few conflicting vehicles.

<sup>1</sup> NB: Northbound, SB: Southbound, EB: Eastbound, WB: Westbound. L: Left, T: Through, R: Right

## 5. Future Background Conditions

As per correspondence with the Town, two horizon scenarios will be analyzed: the year of the development's opening (assumed to be one year after the existing year) and five years after the development's opening (assumed to be six years after existing year). To simulate background traffic growth, a 2.00% per annum growth rate was applied to Mississippi Road's through movements.

### 5.1. External Background Developments

Three background developments were considered for the future background conditions: Jackson Ridge subdivision, the Mississippi Shores subdivision, and the Taber Street developments. The Jackson Ridge Subdivision, directly south of the proposed Site, has been fully built out as of 2023. The Taber Street development has been partially built out. EXP was provided only a site plan for this development, which indicates 19 dwelling units. Based on ITE Trip Generation 11<sup>th</sup> Edition for Low-Rise Multifamily housing, this location is expected to generate 29 AM peak hour trips and 29 PM peak hour trips.

The Mississippi Shores subdivision is currently under construction and is expected to be built out by the opening year horizon. EXP was not provided a traffic report or site plan for this subdivision, instead only receiving synchro files used to project the trip assignment. As per Carelton Place's Development Services, it is expected this development will have 560 dwelling units. Based on ITE Trip Generation 11<sup>th</sup> Edition for Single-Family Detached Housing, the subdivision is expected to generate 357 AM peak hour trips and 502 PM peak hour trips. The trips generated for the subdivision were assigned to the study area as per the provided Synchro files.

As per the Traffic Impact Statement prepared by NovaTech Engineering Consultants in December 2013, their trip distribution methodology assumed that Boyd Street between Arthur Street and Taber Street would be connected. As the connection has not been completed, the existing travel patterns for the subdivision do not reflect the proposed trip distribution.

### 5.2. Traffic Redistribution

Future traffic conditions will consider that the Boyd Street connection between Arthur Street and Taber Street will be completed. To project future traffic patterns with the connected road, existing volumes were redistributed. EXP coordinated with the Town to determine an appropriate redistribution. **Figure 3** outlines the changes in volume distribution with the extension; it is assumed that 50% of vehicles which currently travel along Napolean Street will instead utilize Boyd Street.

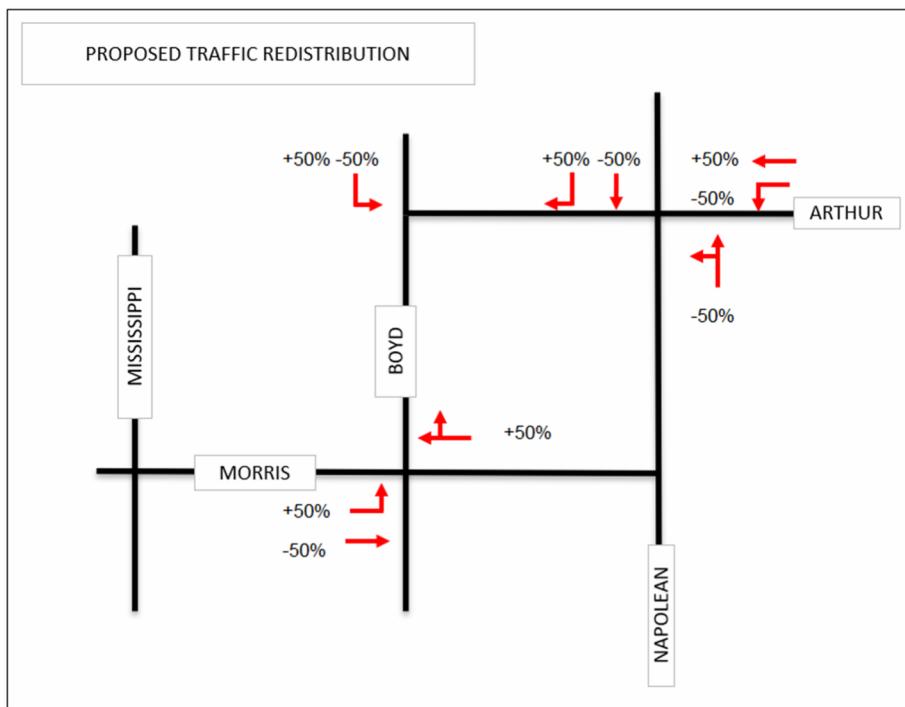

Figure 3 - Proposed Traffic Redistribution

### 5.3. Opening Year Background Traffic Operations

The future background volumes for the opening year horizon are visualized in **Exhibit 2**. The operational analysis for the future background opening year horizon is tabulated in **Table 2**. The outputs for the Synchro analysis are provided in **Appendix E**.

Table 4 - Opening Year Background Traffic Operations Analysis

Intersection	Movement	AM Peak Hour				PM Peak Hour			
		v/c	Delay	LOS	95th Q	v/c	Delay	LOS	95th Q
Boyd St & Woodward St	Overall	-	3	A	-	-	4	A	-
	EB-TR	-	-	-	-	-	-	-	-
	WB-LT	0.00	7	A	0.1	0.00	7	A	0.2
	NB-LR	0.02	9	A	0.1	0.05	9	A	0.1
Boyd St & Arthur St	Overall	-	5	A	-	-	7	A	-
	WB-LR	0.05	9	A	0.2	0.14	9	A	0.5
	NB-TR	-	-	-	-	-	-	-	-
	SB-LT	0.01	7	A	0.2	0.01	7	A	0.3
Napolean St & Arthur St	Overall	-	8	A	-	-	8	A	-
	EB-LTR	0.08	8	A	0.2	0.07	8	A	0.2
	WB-LTR	0.11	8	A	0.4	0.27	9	A	1.1
	NB-LTR	0.10	7	A	0.3	0.11	8	A	0.4
	SB-LTR	0.05	8	A	0.1	0.08	8	A	0.3
Mississippi Rd & Morris St	Overall	-	2	A	-	-	2	A	-
	EB-LTR	0.01	11	B	0.3	0.02	11	B	0.4
	WB-LTR	0.04	10	B	0.1	0.13	12	B	0.4
	NB-LTR	0.00	8	A	0.0	0.00	8	A	0.1
	SB-LTR	0.00	8	A	0.1	0.01	8	A	0.2
Morris St & Code Cres/Boyd St	Overall	-	4	A	-	-	3	A	-
	EB-LTR	0.01	8	A	0.0	0.02	7	A	0.1
	WB-LTR	0.00	7	A	0.0	0.00	7	A	0.0
	NB-LTR	0.01	9	A	0.1	0.00	8	A	0.0
	SB-LTR	0.01	9	A	0.3	0.02	9	A	0.1

The results from the opening year horizon indicate no issues regarding traffic operations within the study area. The worst LOS identified is "B", which is considered acceptable per the assessment of operations. No queuing issues are identified to be of concern in either peak hour.

#### 5.4. Five-Year Post Opening Background Traffic Operations

The future background volumes for the five-year post-opening horizon are visualized in **Exhibit 3**. The operational analysis for the future background five-year post opening horizon is tabulated in **Table 5**. The outputs for the Synchro analysis are provided in **Appendix E**.

Table 5 - Five Year Post Opening Traffic Operations Analysis

Intersection	Movement	AM Peak Hour				PM Peak Hour			
		v/c	Delay	LOS	95th Q	v/c	Delay	LOS	95th Q

	WB-LTR	0.04	10	B	0.1	0.13	13	B	0.5
	NB-LTR	0.00	8	A	0.0	0.00	8	A	0.0
	SB-LTR	0.00	8	A	0.0	0.01	8	A	0.0
<b>Morris St &amp; Code Cres/Boyd St</b>	Overall	-	4	A	-	-	3	A	-
	EB-LTR	0.01	8	A	0.0	0.02	7	A	0.1
	WB-LTR	0.00	7	A	0.0	0.00	7	A	0.0
	NB-LTR	0.01	9	A	0.0	0.00	8	A	0.0
	SB-LTR	0.01	9	A	0.0	0.02	9	A	0.1

The results from the five year post opening horizons indicate no issues regarding traffic operations within the study area. The worst LOS identified is "B", which is considered acceptable as per the assessment of operations. No queueing issues have been identified to be of concern.

The background developments nor the Boyd Street connection result in any adverse impacts on the neighborhood. The northbound-right on Boyd Street at Arhtur Street returned no results and is implied the movement will be free-flowing.

## 6. Site Generated Traffic

### 6.1. Development

The proposed development would consist of 71 townhouse units. The development will have two access locations, both on Boyd Street. It is noted that the south access will be offset from the existing Boyd Street and Arthur Street intersection. The town has expressed concern over the functionality of the access and the intersection when built out.

### 6.2. Trip Generation

The trip generation for the proposed development was calculated using the ITE Trip Generation Manual 11<sup>th</sup> Edition, with the land use code for multifamily low-rise units which represents the proposed townhouses. The peak hour of the adjacent street was used to demonstrate the worse-case scenario for the road network. Based on the study area and lack of available transit routes, a non-auto modal split was not applied to the trip generation. The projected vehicular trips are outlined in **Table 6**.

*Table 6 - Trip Generation*

Land Use	Independent Variable	Parameters	AM Peak Hour		PM Peak Hour	
			In	Out	In	Out
<b>Multifamily Housing Low-Rise (ITE #220)</b>	71 units	Total Trips	45		51	
		Distribution	24%	76%	50%	50%
		New Trips	11	34	26	25

Based on the trip generation, the development can expect to generate 45 AM peak hour trips and 51 PM peak hour trips.

### 6.3. Trip Distribution

The distribution of site traffic was derived based on information from the Town of Carleton Place Transportation Master Plan (TMP), utilizing the commuter information and land use designations provided in the plan. As per Table 12: Workplace Location of CP Residents in the TMP, 50% of residents in Carleton Place commute to and from Ottawa, 35% remain within the town, and the remaining 15% commute to the various surrounding communities.

Within Carleton Place itself, it was estimated that 40% of trips would travel to and from the downtown commercial area, 20% would travel to and from the industrial area in the north part of the town, and 40% would travel to and from the business district and retail areas along Highway 7.

For trips travelling to and from Ottawa, 50% were assigned to access Highway 7 via Mississippi Road and 50% were assigned to access Highway 7 via Franktown Road. Based on the proportioning of trips using the described origin and destination points and Google Maps for preferred routing, the trip distribution applied is summarized in **Table 7** and visualized in **Exhibit 4**.

*Table 7 - Trip Distribution*

Direction	Percentage	AM (In)	AM (Out)	PM (In)	PM (Out)
<b>Arthur St (east)</b>	50%	5	17	13	13
<b>Napolean St (north)</b>	15%	2	5	4	3
<b>Mississippi Rd (south)</b>	35%	4	12	9	9

## 7. Future Total Conditions

### 7.1. Opening Year Total Traffic Operations

The future total volumes for the opening year horizon are visualized in **Exhibit 5**. The operational analysis for the future background opening year horizon is tabulated in **Table 8**. The outputs for the synchro analysis are provided in **Appendix F**.

*Table 8 - Opening Year Total Traffic Operations Analysis*

	SB-TR	-	-	-	-	-	-	-	-
<b>Mississippi Rd &amp; Morris St</b>	Overall	-	2	A	-	-	2	A	-
	EB-LTR	0.01	11	B	0.0	0.02	11	B	0.0
	WB-LTR	0.06	10	B	0.2	0.15	13	B	0.5
	NB-LTR	0.00	8	A	0.0	0.00	8	A	0.0
	SB-LTR	0.00	8	A	0.0	0.01	8	A	0.0
<b>Morris St &amp; Code Cres/Boyd St</b>	Overall	-	4	A	-	-	3	A	-
	EB-LTR	0.02	8	A	0.1	0.02	7	A	0.1
	WB-LTR	0.00	7	A	0.0	0.00	7	A	0.0
	NB-LTR	0.01	9	A	0.0	0.00	8	A	0.0
	SB-LTR	0.03	9	A	0.1	0.03	9	A	0.1

The results for the opening year total traffic operations indicate no issues within the study area. The worst LOS identified is "B", which is considered acceptable as per the assessment of operations. No queueing issues have been identified to be of concern. The only change of note is the northbound through-right movement on Boyd Street at Arthur Street is no longer free-flowing. The added delay to the movement is notably minor.

## 7.2. Five-Year Post Opening Total Traffic Operations

The future background volumes for the five-year post-opening horizon are visualized in **Exhibit 6**. The operational analysis for the future background five-year post opening horizon is tabulated in **Table 9**. The outputs for the synchro analysis are provided in **Appendix F**.

*Table 9 - Five Year Post Opening Total Traffic Operations Analysis*

The added site trips to the study area do not cause any adverse impacts on traffic conditions in the five-year post opening horizon. The worst LOS identified remains as "B" which is considered acceptable as per the assessment of operations. No issues with queueing have been identified. As mentioned for the opening year total horizon, the northbound-right movement for Boyd Street at Arhtur Street is no longer free-flowing, with a minor delay being added.

It can be concluded that the 166 Boyd Street development has minimal impact regarding traffic concerns. No critical movements have been identified, nor have any movements being near a critical state. No queueing issues were identified in any scenario.

### **7.2.1. Boyd Street & Arthur Street/166 Boyd Intersection Analysis**

As per the terms of reference, the Town commented on the proposed south access of the development in relation to the future Boyd Street & Arhtur Street intersection. As per the site plan, the south access is expected to be offset roughly 25 metres south of the intersection. The town raised concerns about the functionality of the access and the intersection.

During the analysis of this study, the 166 Boyd access was modelled to be apart of the Boyd Street & Arthur Street intersection during the future total scenarios. Only a single access point was modelled to determine worst-case conditions (ie everyone leaving and entering via the south access).

The operational analysis for the future total conditions at the intersection does not indicate any issues for the access and the intersection. The volume of traffic at the location is minor, even with all site trips being assigned to the singular access point.

It can be determined that there are no operational concerns regarding the site access and Boyd Street & Arthur Street intersection.

## 8. Site Plan Review

### 8.1. Vehicle Maneuverability

The site plan was assessed to determine vehicle maneuverability for site access and circulation. The assessment was completed using AutoTURN.

Passenger vehicles (PTAC), heavy single unit trucks (HSU) and waste collection vehicles (Rear-Load Garbage Truck, NCHRP Report 659 2010 (herein "WCV")) were used to examine site access and circulation. PTAC vehicle maneuverability was examined on various driveways within the site, determining that typical vehicles are able to maneuver in and out of driveways without causing obstruction or issue.

HSU vehicle maneuverability was examined at both access points, entering and exiting from both directions, as well as turning onto Arthur Street leaving the south access. No issues were identified, determining that large trucks are able to access and depart the site without concern.

WCV maneuverability was examined to determine if a standard waste collection vehicle can access the site, circulate through the site without issue, and depart the site. The circulation was completed for a waste collection vehicle travelling both southbound and northbound; the southbound vehicle also included examining if the vehicle were to turn onto Arthur Street from the site. No issues were identified for the maneuverability.

The AutoTURN maneuverability diagrams are provided as Exhibits:

- **Exhibit 7**- PTAC parking maneuvering in and out of various driveway locations.
- **Exhibit 8**- HSU access maneuvering in and out at both access locations.
- **Exhibit 9**- WCV access and circulation maneuvering, vehicle entering and exiting northbound.
- **Exhibit 10**- WCV access and circulation maneuvering, vehicle entering southbound and exiting both southbound and onto Arthur Street.

### 8.2. Sight Distance

A review of the sight distances at the accesses was completed. The assumed posted speed along Boyd Street is 50 km/h with a design speed of 60 km/h. The design vehicle used was a passenger car per Transportation Association of Canada (TAC) standards (PTAC). Using the TAC guidelines in the Geometric Design Guide for Canadian Roads Manual, (Section 9.2.2.3), the intersection sight distance for a vehicle to make a left turn from a stopping position is 130 metres. The intersection sight distance (ISD) required to make a right-turn from a stopping position is 110 metres. **Exhibit 11** illustrates the intersection sight distance for the north access, and **Exhibit 12** illustrates the intersection sight distance for the south access. No issues are identified for either access.

A review of the roadway characteristics indicates that there is no horizontal curve or steep vertical curve. The road profile on Boyd Street is generally flat. The stopping sight distance (SSD) is the required distance for a vehicle approaching from the north or south approach to detect or observe a stopped vehicle at the site driveway. The stopping sight distance for a vehicle along Boyd Street is 85 metres. The stopping sight distances are visualized as **Exhibit 13**. Based on our review, the required stopping sight distance of 85 metres is met for vehicles approaching the proposed site access.

To allow drivers to have visibility when departing or entering the development at both access points, the visibility triangles provided in the sight distance diagrams should remain clear of any obstructions.

The sight distance around the bends of the crescent within the site plan were assessed. **Exhibit 14** illustrates the intersection sight distance around the bends, and **Exhibit 15** illustrates the stopping sight distances around the bends. The sight distances diagrams determine that vehicles can traverse the site without any issues. The visibility triangles should remain clear of obstructions as to not hinder sight distance in these areas.

## 9. Conclusions

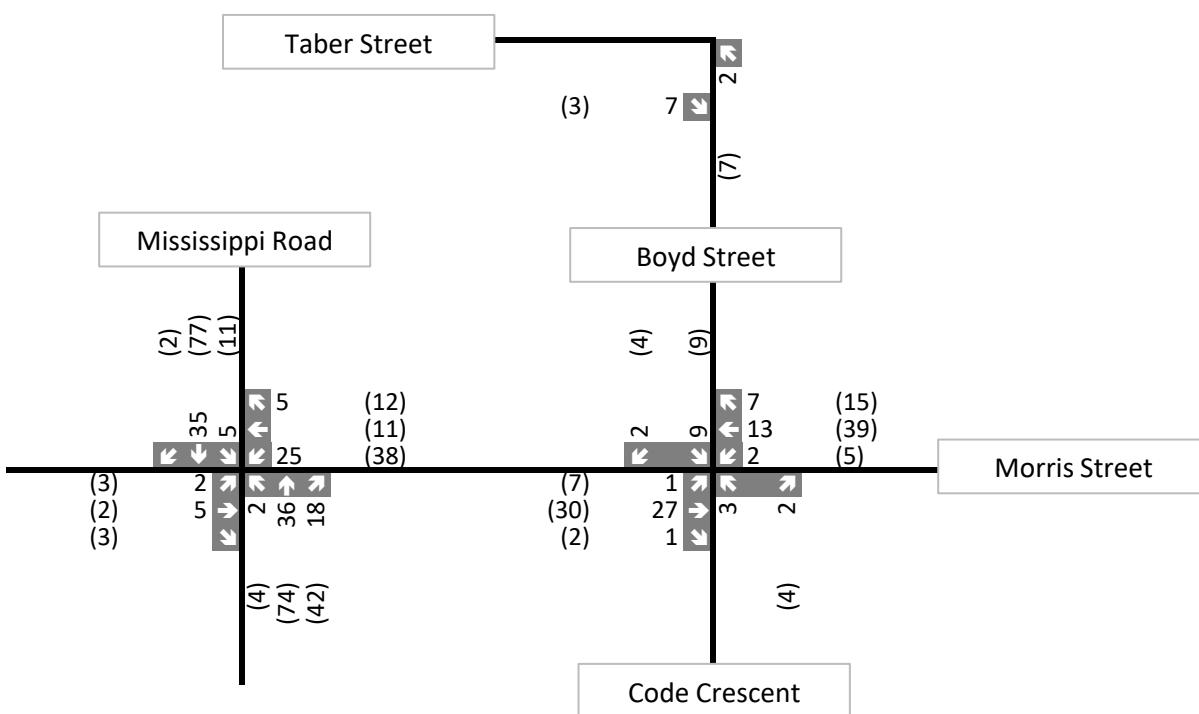

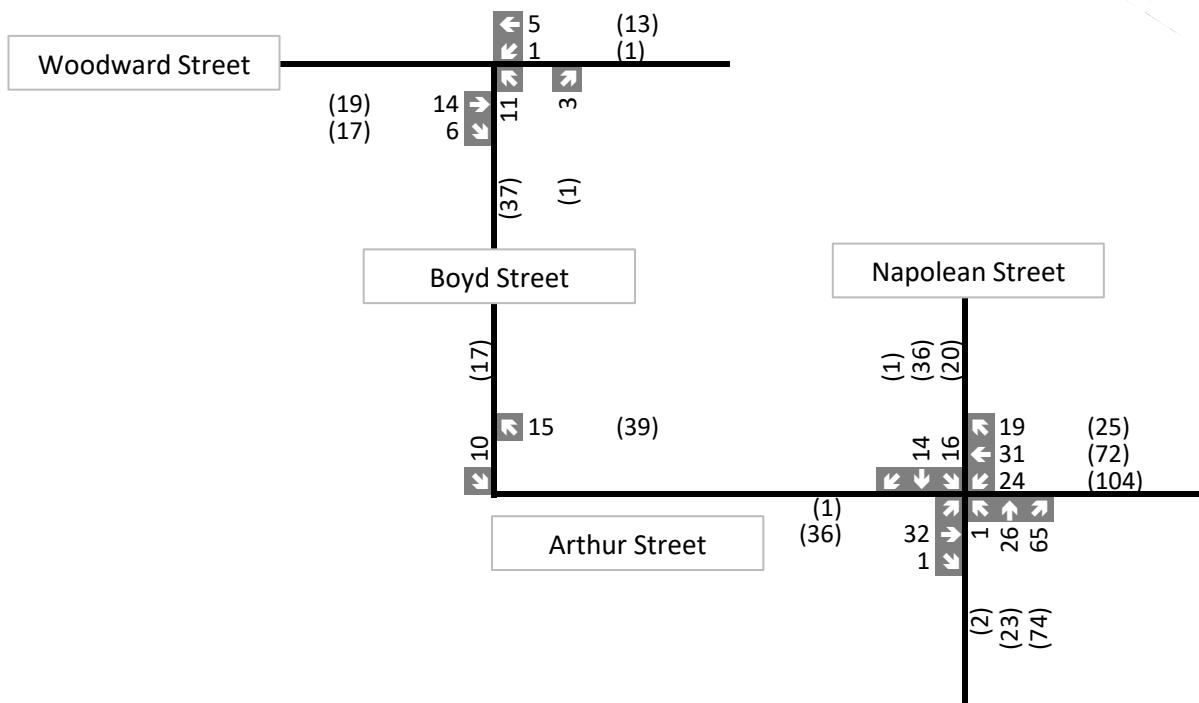

EXP has been retained by A & B Bulat Homes Ltd. to prepare a traffic impact study in support of the proposed residential development located at 166 Boyd Street. Based on our assessment, the following conclusions have been made:

- An operational assessment of the existing conditions did not identify any critical movements within the study area. The worst LOS identified was “B”.
- The Boyd Street connection between Arthur Street and Taber Street is assumed to be completed within the opening year horizon. Existing traffic volumes were redistributed to utilize the connection.
- The operational assessment for the background horizon years indicates acceptable traffic operations within the study area, and the Boyd Street connection resulting in no adverse effects on traffic patterns.
- The site is expected to generate 45 AM peak hour trips and 51 PM peak hour trips.
- Operation assessments for the total horizon years do not indicate any critical movements based on the addition of site trips into the network.
- The vehicle maneuverability for passenger vehicles, trucks and waste collection vehicles was verified to be acceptable in regarding to the site access and circulation.
- Both intersection sight distance and stopping sight distances for the accesses were verified to be acceptable; visibility should be kept unobstructed within the sight triangles.

It is concluded that the development of 166 Boyd Street would have a minimal impact on the overall transportation network.

**Appendix A:**  
Terms of Reference

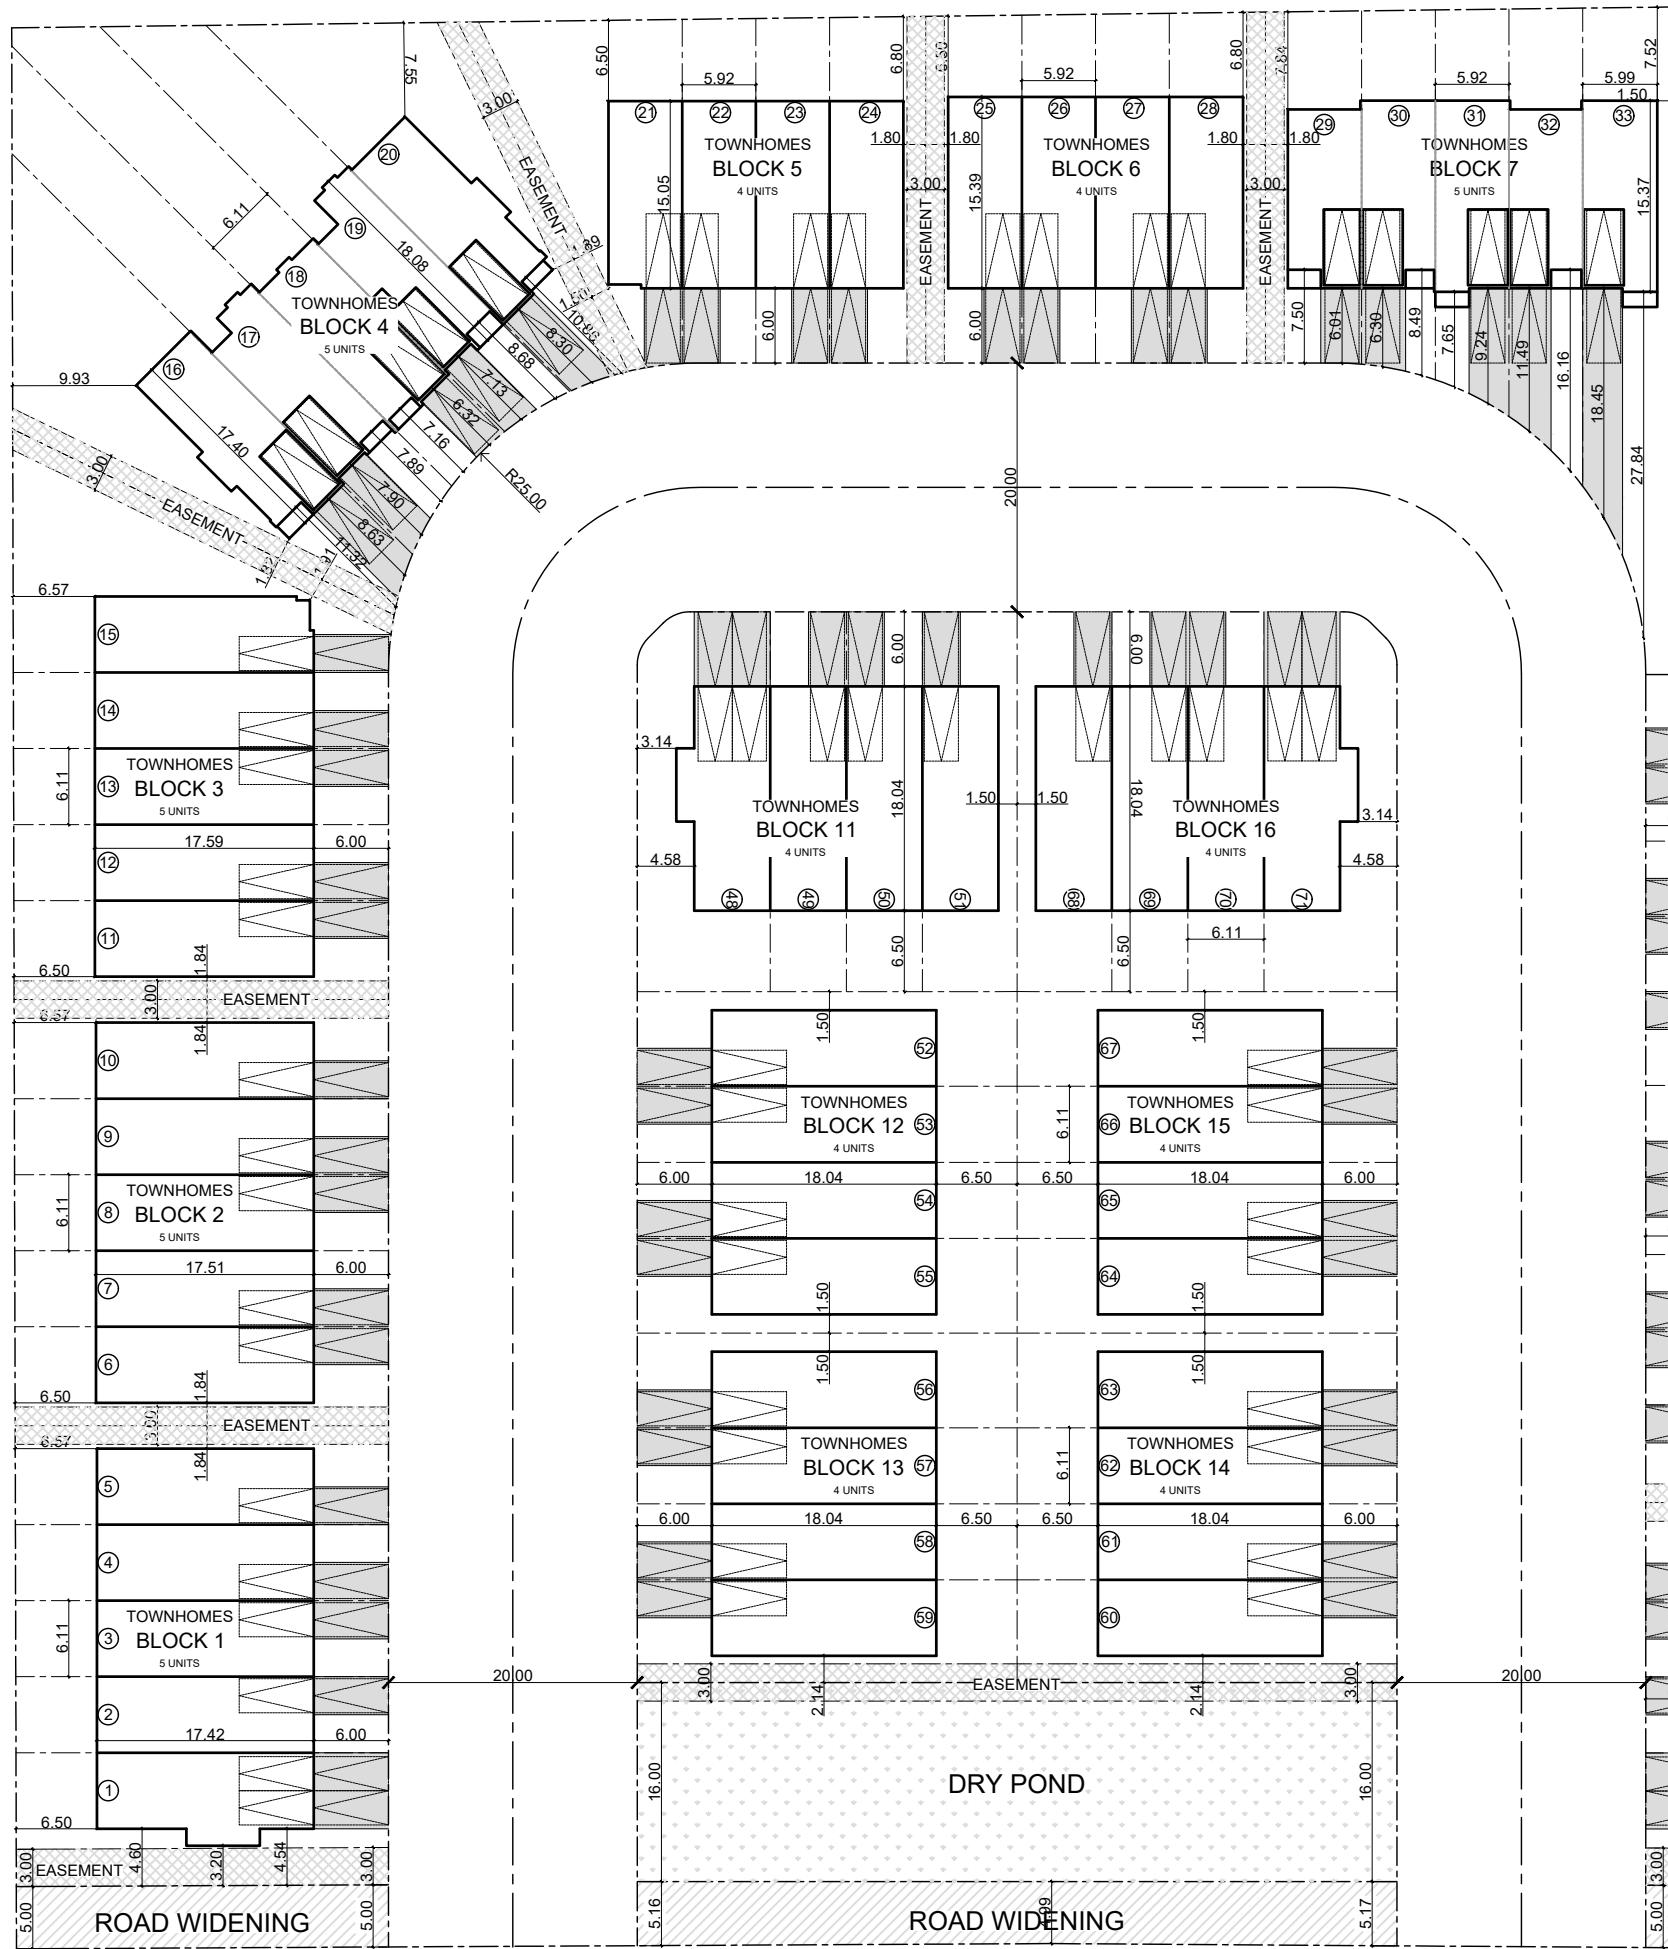

## **166 Boyd Terms of Reference**

EXP has been retained to prepare a traffic study in support of the proposed residential subdivision on Boyd Street. Our proposed workplan includes the following scope:

- Traffic analysis will be conducted using Synchro 11 software, which utilizes HCM methodology for the weekday AM and weekday PM periods.
- The analysis periods will be for the existing year and five-year horizon. 
- Intersection analysis at the following locations is considered:
  - Woodward Street & Boyd Street;
  - Morris Street & Boyd Street / Code Crescent;
  - Mississippi Road & Morris Street; and 
  - Napoleon Street & Arthur Street.
- EXP will arrange for turning movement counts to be conducted.
- If any background developments should be considered for the traffic analysis, the Town should provide these to EXP. 
- For future traffic growth, EXP will assume a growth rate of 2.00% along through movements on Mississippi Road. 
- Site generated traffic will be estimated based on rates outlined in the Institute of Transportation Engineers Trip Generation Manual 11th Edition.
- Site trip assignment and distribution will be derived based on turning movement proportions of conducted turning movement counts. 
- Any improvements which may be necessary to improve traffic operations within the study area will be provided within the report, if applicable.
- A site plan review will be conducted, which will include reviewing the site circulation as well as a sightline review at the proposed site accesses. Transportation Association of Canada (TAC) Manual standards will be used.

## Project #24-009 - EXP Services Inc.

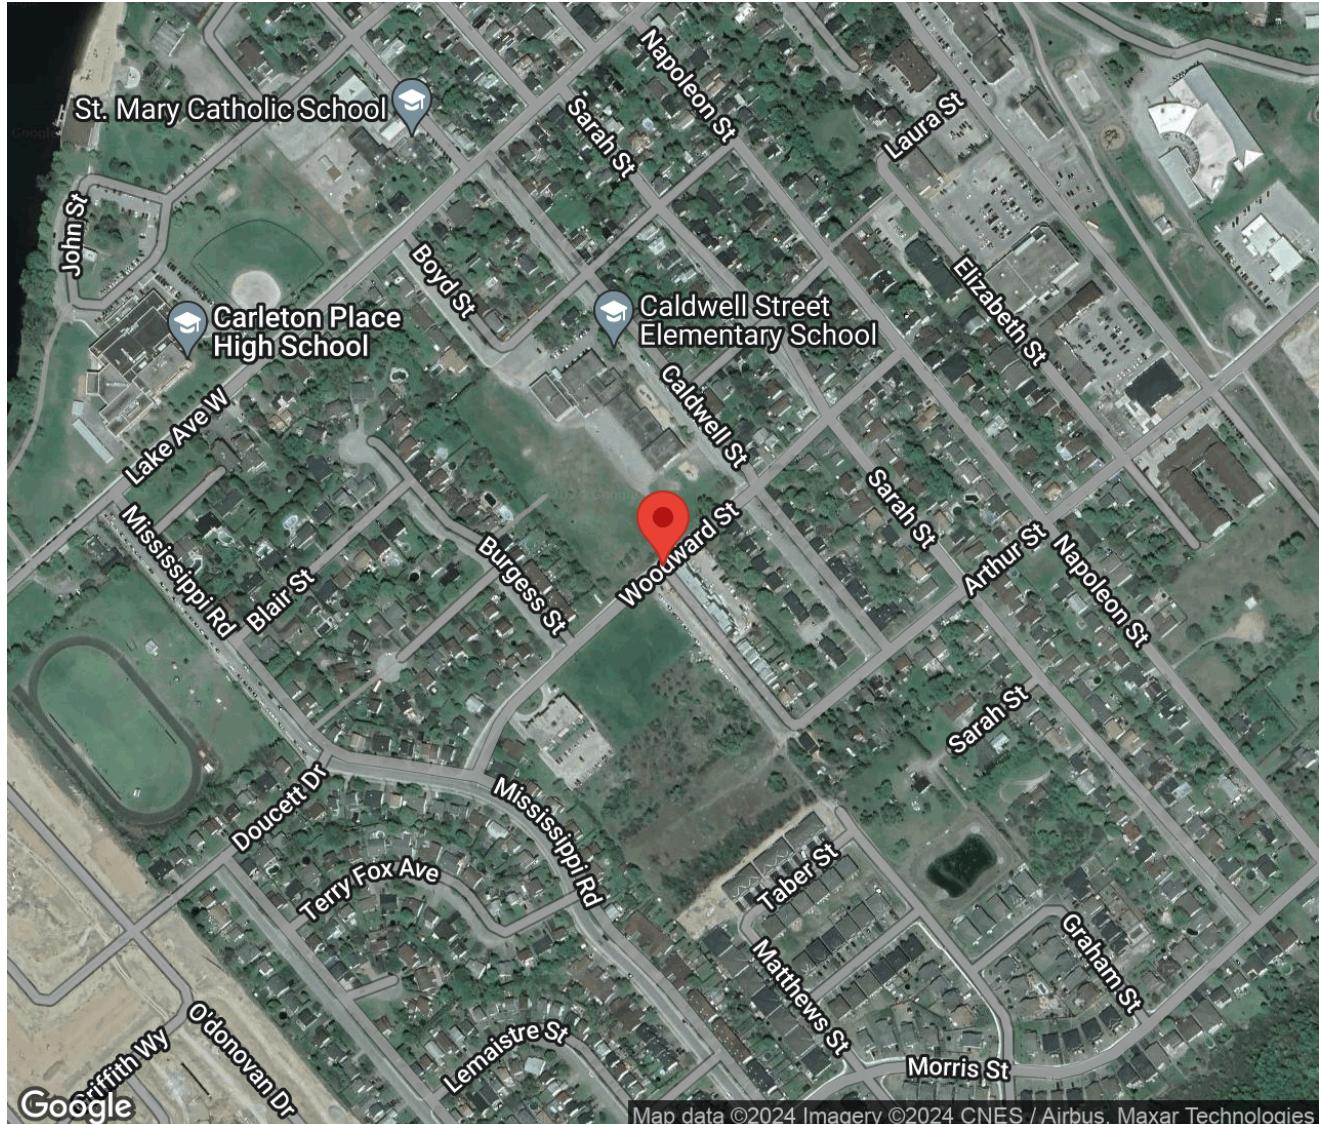

### Intersection Count Report

**Intersection:** Boyd St & Taber St  
**Municipality:** Carleton Place  
**Count Date:** Wednesday, Jan 10, 2024  
**Site Code:** 2400900006  
**Count Categories:** Cars, Trucks, Bicycles, Pedestrians  
**Count Period:** 07:00-09:00, 16:00-18:00  
**Weather:** Clear  
**Comments:**
