

Wild Parsnip Control Type by County Roads

Lanark County bases decisions for control on wild parsnip infestation levels:

- Medium to heavy infestations are generally controlled by boom spraying, light infestations are controlled by spot spraying and very light infestations are controlled by hand, with some exceptions.
- Control decisions may be subject to change based on the wild parsnip inventory (conducted prior to spraying) and plant growth throughout the season.

Control Type Definitions:

Boom	Spraying by a boom arm to control all wild parsnip in the road allowance
Targeted Boom	Small scale boom spraying, generally <500m, of a wild parsnip patch (May be only a portion of the road allowance width) where infestation levels are too heavy for spot spraying
Spot	Spraying by hose and a Hand held nozzle, where only targeted plants are sprayed
Targeted Spot	Spot spraying of a targeted wild parsnip patch, generally <10% of the road section, where infestation levels are too heavy for Hand pulling
Hand	Digging, pulling, cutting and clipping of wild parsnip by County forces
Adopt	Section is adopted by an Enhance Adopt-A-Road group that digs, pulls, cuts and clips wild parsnip (contact the Public Works office for more information or how to get involved)

Revision Date: June 18, 2025
