

Wild Parsnip Control Type by County Roads

Lanark County bases decisions for control on wild parsnip infestation levels:

- Medium to heavy infestations are generally controlled by boom spraying, light infestations are controlled by spot spraying and very light infestations are controlled by hand, with some exceptions.
- Control decisions may be subject to change based on the wild parsnip inventory (conducted prior to spraying) and plant growth throughout the season.

Control Type Definitions:

| | |
|---------------|--|
| Boom | Spraying by a boom arm to control all wild parsnip in the road allowance. |
| Targeted Boom | Small scale boom spraying, generally <500m of a wild parsnip patch (may be only a portion of the road allowance width) where infestation levels are too heavy for spot |
| Spot | Spraying by hose and a hand held nozzle where only targeted plants are sprayed. |
| Targeted Spot | Spot spraying of a targeted wild parsnip patch, generally <10% of the road section where infestation levels are too heavy for hand pulling. |
| Hand | Digging, pulling, cutting and clipping of wild parsnip by County forces. |
| Adopt | Section is adopted by an Enhanced Adopt-A-Road group that digs, pulls, cuts and clips wild parsnip (contact the Public Works office for more information or how to get involve |

Revision Date: March 27, 2026
